

Change Manager

Fully integrated inventory and workflow management for your IT physical infrastructure

Inventory management allows for easily tracking and executing moves, adds and changes of equipment in the datacenter

Datacenter Management Application

Change Manager enables operators to gain control over the datacenter environment by implementing organized moves, adds, and change work processes, significantly reducing the risk for inadvertent downtime.

With its automated workflow system, operators can assign work orders, reserve space, track status, and extract an audit trail for complete visibility and history into the change lifecycle.

Change Manager includes a robust inventory management application which provides a visual model of the room and rack layout. Rack-level views enable easy tracking of IT assets and available space.

The Mobile Datacenter Assistant provides you with your datacenter inventory while on the datacenter floor, enables bar-code scanning and ensures inventory data integrity and improving operational efficiency.

Mobile Datacenter Assistant

Handheld, wireless bar-code scanner with Change Manager application for creating changes on the go. Based on Symbol MC70 hardware.

Change Manager Options

Integrates with Capacity Manager

Planning and optimizing utilization of actual power, cooling and rack capacities via shared datacenter model, enabling efficient equipment provisioning and right-sizing of your datacenter

Workflow System	Benefits
Automated work order process	Create work orders and automatically generate tasks to move, add or change IT equipment. Schedule, assign and track the status of itemized tasks to implement changes in the datacenter
Schedule of changes	View agenda of pending changes to assist time management and workload balancing
Custom tasks	Specify the activities required to fulfill the needs of the individual work order
Space reservation	Reserve rack space for future equipment to be installed
Progress report view	Easily track activity and progress by sorting on work order; due date, status and priority
Email notification	Inform select users of work order completion
Inventory Management	Benefits
Inventory management	Management of inventory located at both room and rack level, providing an instant overview of data center assets
Virtual store room	Keep track of new devices from arrival on site in the virtual store room, as best practices recommend
Device catalog	Utilize the extensive library of physical infrastructure and IT devices from leading vendors
Reporting Capabilities	Benefits
Asset audit trail	Track properties and location changes for assets. Filter, print and export information by; date and work orders
Personnel audit trail	Gain total transparency to physical equipment changes by user
Rack audit	Perform instant inventory management through view of rack content and history
Change report	Instant visibility to all moves, adds and changes to the entire datacenter; at either rack, row or room level for one or more equipment changes
Mobile Change Management	Benefits
Wireless Mobile Datacenter Assistant	Work online or offline to access work orders and asset data whilst on the move in the datacenter.
Mobile bar-code asset search	Quickly locate bar-coded assets via the search functionality using the optional Symbol MC70 Mobile Datacenter Assistant
Offline mobile synchronization	Keep your physical datacenter synchronized with your mobile datacenter management tool
Integration	Benefits
Integration with InfraStruXure Central & Capacity Manager	Ensure mature and synchronized data throughout the entire datacenter life cycle through common data model shared with InfraStruXure Central & Capacity Manager
