Advantage Max Service Contract Option with Annual Data Center Health Check

Maximizing Small- and Medium-Sized Data Center Uptime and Performance While Reducing Cost

Faced with business-critical responsibility, expanding workloads, evolving technologies, aging facilities, and increasing environmental regulations, managers of modestly sized data centers are just as likely as their large enterprise counterparts to encounter limited floor space, inefficient power and cooling infrastructure, and rising operations cost — all the while under stricter budget constraints.

The Schneider Electric™ Advantage Max Data Center Health Check cost-effectively addresses this heightened small- to medium-sized business requirement within standard preventive maintenance service visits.

Leveraging the industry-recognized Schneider Electric StruxureWare® for Data Center technology (DCIM software) and streamlined for Data Centers/IT Rooms of up to 500 square meters (5,000 square feet) in size, this offering includes proactive asset planning guidance, along with analysis of critical power, cooling, and room layout domains. Recommendations for improvement are provided relative to industry best practices.

---

**Physical Layout Management**
Optimize IT Room design for energy efficiency and information security

**Power Supply Management**
Balance downtime risk with cost of power redundancy

**Air Distribution Management**
Separating hot and cold air flow increases energy efficiency

**Rack Space**
Compliance with generally accepted standards helps maximize uptime

**Air Conditioning Management**
3D thermal modeling quickly identifies over-cooling and hot spots

**Asset Management Planning**
Manage preventive maintenance visit and component replacement scheduling to minimize budget requirements
Advantage Max Service Contract Option
The Advantage Max Service Contract Option can be added to existing Schneider Electric Advantage Plus, Prime, or Ultra service contracts, providing Asset Capacity Trending Reports for Schneider Electric UPS and cooling systems, in addition to the Annual Data Center Health Check.

Annual Data Center Health Check
The Annual Data Center Health Check consists of two components: an Asset Management Plan and an IT Room Audit.

Asset Management Plan
Summary table aggregating individual Schneider Electric UPS and cooling system capacity and component reliability data, helping to maximize data center uptime in a budget-conscious manner.

IT Room Audit
The annual IT/computer room audit benchmarks critical data center domain operation with respect to capacity, uptime, performance, and energy efficiency, documenting potential risks and providing improvement recommendations as necessary.

Asset Capacity Trending
Individual summaries for selected Schneider Electric UPS and Cooling systems, these reports provide guidance with respect to maximizing asset life cycle reliability.
